CHAPTER 2 EQUIPMENT CONFIGURATION

This chapter contains a general description of the physical equipment configuration of a Series Three PC. Included are descriptions of the base units, CPU/Programmer and I/O structure.

BASE UNITS

The Series Three is provided as a family of base units into which I/O modules can be inserted. Base units are available to contain either 4, 6 or 8 I/O modules. Each base unit requires a power supply, which is mounted on the left side of each base unit. Figure 2.1 shows the 6 slot and 8 slot base units.
